

New Records of *Pidonia takechii* (Coleoptera, Cerambycidae) from the Chûbu District, Central Japan

Mikio KUBOKI

47-15, Ohara 1-chome, Setagaya-ku, Tokyo, 156 Japan

Pidonia takechii KUBOKI is one of the most dominant species in the evergreen conifer zone of the Asama, Mikuni and Nikko mountain areas, central Honshu, Japan. Recently, I had an opportunity to examine a number of specimens collected in the northwestern parts of the Chûbu District, Honshu, Japan.

Pidonia (Pidonia) takechii KUBOKI

Pidonia (Pidonia) takechii KUBOKI, 1986, Ent. Pap. pres. Kurosawa, Tokyo, 297.

Head, thorax and abdomen fulvous; first to second sternites faintly dark brown to black in male; antennae almost fulvous; elytra yellowish fulvous with black markings, which are sometimes almost lacking; femora fulvous with black markings in apical halves.
