Recently, some Taiwanese anthribid beetles were submitted to me for taxonomic study by Dr. Kintaro BABA, who had been studying the insect fauna of Taiwan. They were mostly collected by himself in 1986 at the southern part of Taiwan. The results of my examination of this collection will be given in this short report.

I wish to express my deep gratitude to Dr. Kintaro BABA, who always provided with anthribid specimens for my study.
