## Notes on the Bembidiinae (Carabidae) of Japan XIII. New Locality of *Bembidion (Pseudolimnaeum) galloisi*

Seiji MORITA

Higashi-gotanda 5–19–7, Shinagawa-ku, Tokyo, 141–0022 Japan

Examining the carabid collection made by Mr. YOSHIDA, I found an unrecorded bembidiine species from Amami-Ôshima Is., Southwest Japan. It agrees with *Bembidion (Pseudolimnaeum) galloisi* NETOLITZKY known from the main islands of Japan, including Yaku-shima Is. The collecting data are as given below:

*Specimen examined.* 1 ♀, Mt. Yuwan-dake, Amami-Ôshima Is., Kagoshima Pref., Southwest Japan, 21–VII–1997, M. YOSHIDA leg.

I am thankful to Mr. Masataka YOSHIDA for his kindness in giving me the opportunity to record this specimen.
