

Two New Records of Anthribinae (Coleoptera, Anthribidae) from Thailand

Toshio SENOH

Department of Biology, Chuo University High School,
Koganei, Tokyo, 184–8575 Japan

At the end of the spring of this year, Dr. Masatoshi TAKAKUWA of the Kanagawa Prefectural Museum of Natural History, visited the peninsular parts of Thailand for collecting insects. Some anthribids collected on that occasion were submitted to me for taxonomic study, all collected at the Si Phangnga National Park, Phang Nga Prov., near the Island of Phuket. These contained nine species, two of which were newly recorded from Thailand.

Before going further, I wish to express my hearty thanks to Dr. M. TAKAKUWA for his kindness in submitting invaluable specimens to me for taxonomic study.

Cedus nigropictus KIRSCH, 1875

Cedus nigropictus KIRSCH, 1875, Mitt. zool. Mus. Dresden, **1**: 53 (Malacca).

Specimens examined. 3 ♂♂, 2 ♀♀, Si Phangnga N.P., Phang Nga, S. Thailand, 21~25–IV–2000, M. TAKAKUWA leg.

Distribution. South Thailand (new record), Malacca.

Habrissus heros PASCOE, 1871

Habrissus heros PASCOE, 1871, Ann. Mag. nat. Hist., (4), **8**: 359 (Labuan Is., off Borneo). — JORDAN, 1913, Rec. Ind. Mus., **9**: 208 (Shinkip Is., off Sumatra); 1928, Novit. zool., **34**: 100 (Gunong Tahan, W. Malaysia). — HELLER, 1918, Tydschr. Ent., **61**: 256.

Specimen examined. 1 ♂, Si Phangnga N.P., Phang Nga, S. Thailand, 21~25–IV–2000, M. TAKAKUWA leg.

Distribution. South Thailand (new record), West Malaysia, Shinkip Is. (off Sumatra), Labuan Is. (off Borneo).
