

An Adult Host Record of *Oberea nigriventris*  
(Coleoptera, Cerambycidae)

Yoshiyasu KUSAKABE

Sumiregaoka 21-12, Tsuzuki-ku, Yokohama, Kanagawa, 224-0013 Japan

It has been known that the adult and larva of *Oberea nigriventris* BATES are associated with *Cynanchum caudatum* (MIG.) MAXIM., *Marsdenia tomentosa* MORREN et DECAISNE of the Asclepiadaceae, and *Pyrus pyrifolia* NAKAI var. *culta* NAKAI of the Platanaceae. Recently, I collected many adults of this species on *Tylophora aristolochioides* MIG. (Asclepiadaceae). The adult *Oberea* fed leaves and stems of the plant, and made spawning behavior. *Tylophora aristolochioides* is the fourth host plant of the species. The collecting data are as follows:

6♂♂, 12♀♀, Mt. Takao-san, Hachiôji City, Tokyo, Japan, 10~21-VII-2000 (observations on total 5 days), Y. KUSAKABE leg.

I thank Mr. Kaoru SAKAI for his useful information of the collecting site, and Mr. Nobuyuki KOBAYASHI for determination of the plant.
