

## Additional New Records of the Staphylinid Beetles from the Island of Awaji-shima, West Japan

Yasuaki WATANABE

Narusedai 2-26-33, Machida-shi, Tokyo, 194-0043 Japan

Eighteen species of staphylinid beetles, with the exception of pselaphine beetles, have hitherto been reported from the Island of Awaji-shima in Hyôgo Prefecture, West Japan, by KINOSHITA (1973, 1974), TAKAHASHI (1984), NAOMI (1997), WATANABE (2001, 2004) and KAWAKAMI (2007). Through the courtesy of Dr. Masaru NISHIKAWA I had an opportunity to examine a short series of staphylinid beetles obtained on this island. Four of them are new to the fauna of the island. They are recorded below with the collecting data.

1. *Sepedophilus germanus* (SHARP)  
3 ♂♂, Mt. Yuzuruha-san (600 m alt.), 9-VI-2004, M. NISHIKAWA leg.
2. *Domene crassicornis* (SHARP)  
3 ♂♂, 2 ♀♀, same locality and collector as above, 5-VI-2004.
3. *Philonthus japonicus* SHARP  
1 ♂, same locality and collector as above, 9-VI-2004.
4. *Indoquedius junio* (SHARP)  
1 ♀, same data as above.

I thank Dr. M. NISHIKAWA, Tokushima-shi, for his kindness in giving me the specimens.
