Weevil fauna of Niijima and Shikine-jima Islands has been recorded by MORIMOTO (1981), MORIMOTO & MIYAKAWA (1985), HIRANO *et al.*, (1993), MORIMOTO *et al.*, (2006) and YOSHITAKE (2012), and a total of 65 and 27 species in five and two families are known, respectively.

In the recent short survey, following species were newly found from the respective island and are recorded below. Collector names are abbreviated as follows: CZ: Chennan ZHANG; HF: Hiroshi FUJITA; HK: Hiroaki KOJIMA and KT: Kentarô TSUJII.

The authors thank Messrs. H. FUJITA and K. TSUJII for their kind donation of materials and Dr. K. MORIMOTO for his review of the manuscript. This study was supported by KAKENHI (24510333).
