

Precise Locality of *Pachyrhynchus roseomaculatus* WATERHOUSE (Coleoptera, Curculionidae, Entiminae) in the Philippines

Hiraku YOSHITAKE

Kyushu Okinawa Agricultural Research Center (Itoman residence),
NARO, 820 Makabe, Itoman, Okinawa, 901–0336 Japan

Pachyrhynchus roseomaculatus WATERHOUSE, 1841, which is a senior synonym of *P. striatus* WATERHOUSE, 1841, was originally described from “the Philippine Islands”, based on material collected by Hugh CUMING (WATERHOUSE, 1841, 1843). SCHULTZE (1923) suggested that this species might occur in Luzon, but the detailed locality has not been known to date because no additional specimens of this species have been reported since the original descriptions of *P. roseomaculatus* and *P. striatus*. Recently, through the courtesy of Mr. K. SUGINO (Nishinomiya), I had an opportunity to examine two specimens of *P. roseomaculatus*, which were collected by himself from Masbate Island in the Bicol Region of the Philippines. In this paper, I record *P. roseomaculatus* from the island as the first precise locality of this species. I thank Mr. K. SUGINO for the donation of the specimens.

Pachyrhynchus roseomaculatus WATERHOUSE, 1841

Pachyrhynchus roseomaculatus WATERHOUSE, 1841, 25 (type locality: “the Philippine Islands”).

Pachyrhynchus striatus WATERHOUSE, 1841, 25 (type locality: “the Philippine Islands”). — YOSHITAKE, 2019, 193 (junior synonym of *P. roseomaculatus* WATERHOUSE, 1841).

See YOSHITAKE (2019) for detailed synonymic list.

Specimens examined. Philippines: Luzon. 2 males, Bicol Region, Masbate Island, Mt. Uac, 14.VIII.1981, K. SUGINO leg.

Note. Hugh CUMING, the collector of the holotypes of *Pachyrhynchus roseomaculatus* and *P. striatus*, certainly visited Masbate Island and various areas in the Bicol Region during his journey to the Philippine Islands (DANCE, 1980: 487), so he probably collected the specimens on the island or its adjacent area.
