

New Record of *Trichocateres fasciculifer* (Coleoptera, Trogossitidae) from Thailand

Hiroyuki YOSHITOMI

Entomological Laboratory, Faculty of Agriculture Ehime University,
Tarumi 3–5–7, Matsuyama, 790–8566 Japan

The genus *Trichocateres* KOLIBÁČ, 2010 belongs to the tribe Lophocaterini, subfamily Lophocaterinae (KOLIBÁČ, 2013). *Trichocateres fasciculifer* KOLIBÁČ, 2010 (Fig. 1 left) is monotypic species of the genus, and is very unique species in having remarkable dorsal habitus. This species was described on the basis of three specimens collected from Assan (India) and North Laos (Fig. 1 right), and seems to be relatively rare (KOLIBÁČ, 2010).

Recently, I examined one specimen of this species collected from Thailand, and record it for the first time from Thailand as follows.

Specimen examined. 1 ex., Ban Pha-moon, Mt. Doi Inthanon, N. Thailand, 26.V.1983, H. AKIYAMA leg., preserved in SASAJI Collection of Kyushu University Museum.

I thank Dr. M. MARUYAMA (Kyushu University Museum) for giving me the chance to examine the interesting material, and Mr. T. IWATA (Ehime University) for taking photograph.
