

Distribution Records of the Scarabaeoidea (Coleoptera) from Iheya-jima, Noho-jima and Izena-jima Islands, the Iheya-Izena Islands in the Ryukyus, Southwestern Japan

Naoki KANEKO and Sôichirô TARU

Laboratory of Entomology, Tokyo University of Agriculture, 1737 Funako, Atsugi, Kanagawa, 243–0034 Japan

Abstract During our continuous survey, 34 scarabaeoid species belonging to four families were recognized from the Iheya-Izena Islands of the Ryukyus, southwestern Japan. Of these, two, five, and four species are newly added to the faunae of Iheya-, Noho-, and Izena-jima Islands, respectively. Including the results of previous studies, a total of 51 scarabaeoid species belonging to four families are known to occur on the islands. The number is equivalent to 63% of scarabaeoid species known from Okinawa-jima Island, including that the Iheya-Izena Islands, especially Iheya-jima Island, has the relatively rich scarabaeoid fauna despite the small area.

Introduction

The Iheya-Izena Islands are known to be a small archipelago located north off Okinawa-jima Island of the Ryukyus, southwestern Japan, consisting an amount of small to very small islands such as Iheya-, Noho-, and Izena-jima Islands. The scarabaeoid fauna of the islands has been studied by a number of researchers (OMINE, 1963; KUSUI, 1976, 1981, 1991, 2005, 2012; SUGIMOTO, 1977; MIYAKE, 1986; SAKAI, 1989, 1998; TSUKAMOTO, 1987; HAYAKAWA *et al.*, 1995; KIUCHI & INADA, 1997; HAYAKAWA, 1998; KIMURA & INADA, 1998; ITÔ, 2000; SHIRASUGI, 2000; FUJIOKA, 2001, 2005; SASAKI *et al.*, 2002; FUJITA, 2002, 2009; DOI, 2002; HORIGUCHI, 2005; TANAKA, 2006; SIMOJI, 2009; KATAYAMA, 2011; OKAJIMA & ARAYA, 2012; MATSUMURA *et al.*, 2018; INADA, 2018; KOBAYASHI, 2018). As a result, to date, 45, one and 23 species have been recorded from Iheya-, Noho-, and Izena-jima Islands, respectively.

Iheya-jima Island, elongated in a north-south direction, is the largest in area (20.9 km^2) and the richest in vegetation in the Iheya-Izena Islands, with mostly mountainous areas (DOUMAE, 1984). Many cattle are grazed in northern area with large rangelands (Fig. 1).

Noho-jima Island, adjacent to the southern part of Iheya-jima Island, is very small (1.1 km^2) and flat (DOUMAE, 1984). Natural vegetation of the island is very poor due to active cultivation of sugarcane and sweet potato.

Izena-jima Island is the second largest (13.8 km^2) in the Iheya-Izena Islands, being located about 5 km south off Iheya-jima Island (DOUMAE, 1984). This island is topographically divided by mountains into northwest and southeast areas. Southeast area has good vegetation with Mt. Chijin-yama (119.6 m above sea level), whereas other areas except in the mountains are lowland with sugarcane field.

Our field surveys conducted in the three islands in 2017 and 2018 resulted in recognition of a total of 34 scarabaeoid species. Of these, two, five, and four species were considered unrecorded from Iheya-, Noho-, and Izena-jima Islands, respectively. Here we first record the species from the respective islands and provide a list of all 48 scarabaeoid species confirmed in previous and present studies in these islands (Table. 1).

All the examined specimens are preserved in the Laboratory of Entomology, Tokyo University of Agriculture, Atsugi, Kanagawa, Japan (TUA). Abbreviations used for collector names as follows: NK — Naoki KANEKO, ST — Sôichirô TARU, KO — Kazuyuki OSHIMA, HN — Hiroki NAGANO, YT — Yutaka TAMADERA, YF — Yûsuke FUJISAWA, and YI — Yûto IMAFUKU. Scientific names follow the recent catalogue of AHRENS *et al.* (2016), but partially follow MATSUMOTO (2016).

Results

The following is a list of the Scarabaeoid beetle species collected during our surveys in 2017 and 2018.

Family **Hybosoridae** ERICHSON, 1847

Subfamily **Hybosorinae** ERICHSON, 1847

Phaeochrous emarginatus emarginatus (CASTELNAU, 1840) (Fig. 2)

Specimens examined. [Iheya-jima Is.] 6 exs., Gakiya-dam, 21.VII.2017, NK, by light trap; 11 exs., near Mt. Maedake, 22.VII.2017, NK, by light trap; 8 exs., Mt. Tannadake, 24.VII.2017, NK, by light trap. [Izena-jima Is.] 4 exs., Jicchaku, 21.VII.2017, KO, by light trap.

Note. New to Izena-jima Island.

Family **Lucanidae** LATREILLE, 1804

Subfamily **Lucaninae** LATREILLE, 1804

Aegus laevicollis doi FUJITA, 2002

Specimens examined. [Iheya-jima Is.] 7 exs. (larvae), Mt. Gayôyama, 14.III.2017, NK (eclosion: 4.VI.2017).

Dorcus titanus okinawanus (KRIESHE, 1922)

Specimens examined. [Iheya-jima Is.] 1 ex., Mt. Tannadake, 24.VII.2017, NK, by light trap; 5 exs., Mt. Koshidake, 21–23.VI.2018, ST, by light trap. [Izena-jima Is.] 1 ex. (larva), Mt. Ônoyama, 10.III.2017, NK (eclosion: 7.VI.2017).

Nigidius lewisi BOILEAU, 1995

Specimens examined. [Iheya-jima Is.] 2 exs., Mt. Gayôyama, 14.III.2017, NK; 1 ex., near Tana-jinja, 23.VII.2017, NK.

Prosopocoilus dissimilis hayashii FUJITA, 2009

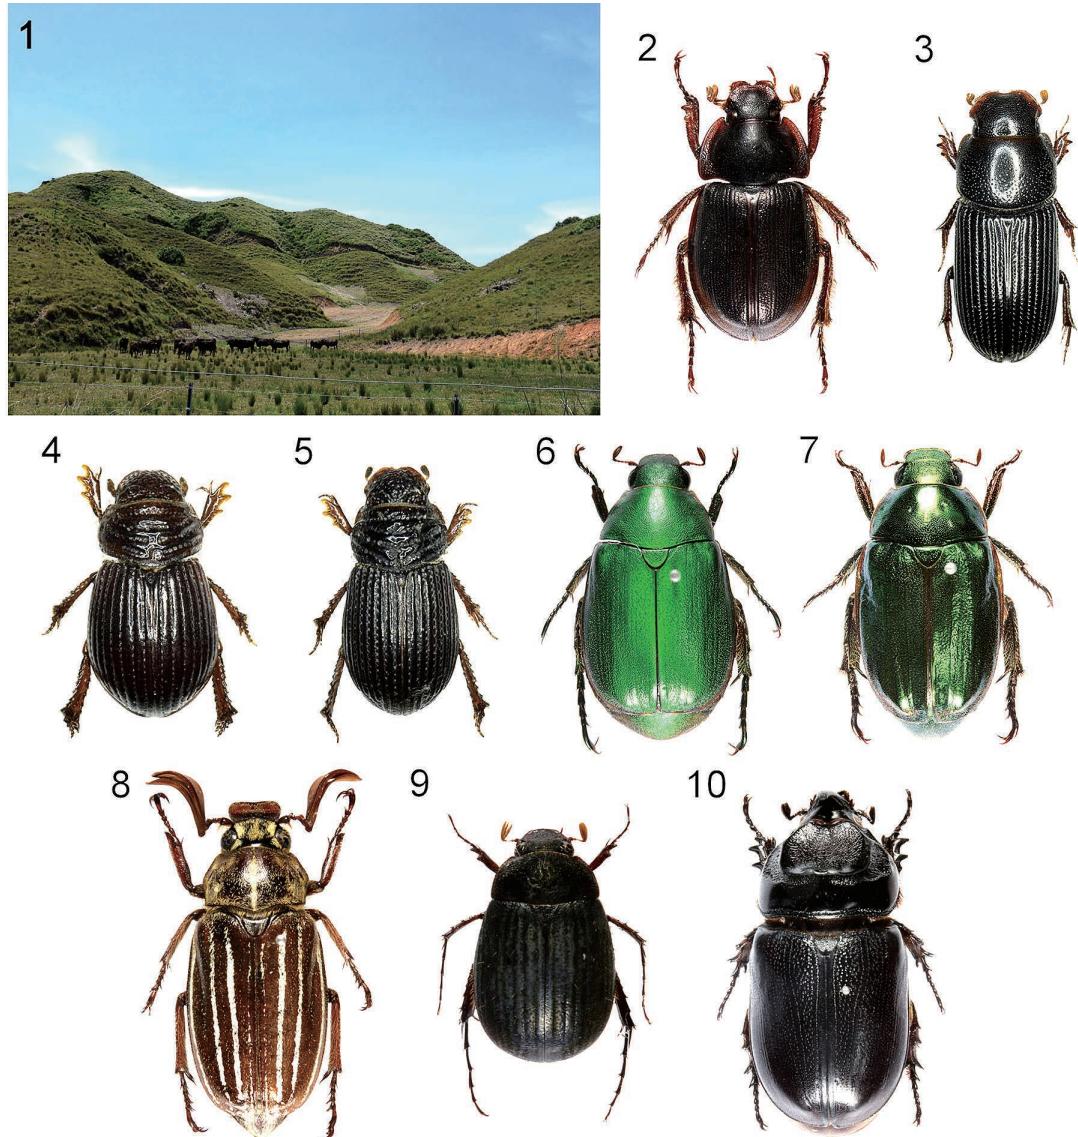

Specimen examined. [Iheya-jima Is.] 1 ex., Gakiya-dam, 2.VII.2017, NK, by light trap.

Family **Ochodaeidae** MULSANT et REY, 1871

Subfamily **Ochodaeinae** MULSANT et REY, 1871

Notochodaeus interruprus kurosawai (OCHI et KAWAI, 2002)

Specimens examined. [Iheya-jima Is.] 7 exs., Mt. Koshidake, 3–6.III.2018, ST, by flight interception trap; 2 exs., Mt. Gayôyama, 3–6.III.2018, ST, by flight interception trap.

Figs. 1–10. A collecting site and dorsal habitus of scarabaeoid species from the Iheya-Izena Islands. — 1, Rangeland on the northern mountainous region in Iheya-jima Is.; 2, *Phaeochrous emarginatus emarginatus* (CASTELNAU); 3, *Ataenius picinus* HAROLD; 4, *Psammodius kobayashii* NOMURA; 5, *Rakovicius coreanus* (KIM); 6, *Anomala albopilosa yashiroi* (SAWADA); 7, *Anomala edentula okinawana* NOMURA; 8, *Polyphylla schoenfeldti* BRENSKE; 9, *Maladera oshimana* NOMURA; 10, *Oryctes rhinoceros* (LINNAEUS).

Family **Scarabaeidae** LATREILLE, 1802Subfamily **Aphodiinae** LEACH, 1815***Aphodius marginellus*** (FABRICIUS, 1781)

Specimens examined. [Iheya-jima Is.] 16 exs., Mt. Tannadake, 24.VII.2017, NK.

Aphodius sublimbatus MOTSCHULSKY, 1860

Specimens examined. [Iheya-jima Is.] 2 exs., Mt. Tannadake, 24.VII.2017, NK.

Aphodius urostigma HAROLD, 1862

Specimens examined. [Iheya-jima Is.] 5 exs., Mt. Tannadake, 14.III.2017, YT; 49 exs., Mt. Tannadake, 24.VII.2017, NK.

Ataenius picinus HAROLD, 1867 (Fig. 3)

Specimens examined. [Izena-jima Is.] 9 exs., Compost center, Jicchaku, 11.III.2017, NK; 3 exs., Jicchaku-kaigan, 11.III.2017, YF; 2 exs., Jicchaku, 21.VII.2017, KO, by light trap; 1 ex., Uchihana, 22.VII.2017, KO, by light trap.

Notes. New to Izena-jima Island as well as to the Iheya-Izena Islands. These specimens were found from huge piles of compost in a compost center. This dung beetle, an alien species widely distributed in the Ryukyus and Kyushu (KAWAI, 2000; HOSOYA, 2014), may inhabit Iheya- and Noho-jima Islands due to the presence of sufficient food resources for this species such as dung and crop remnants from activities of cattle grazing and sugarcane cultivation.

Psammodius kobayashii NOMURA, 1973 (Fig. 4)

Specimens examined. [Iheya-jima Is.] 5 exs., Higashi-kaigan, near Mt. Gayôyama, 14.III.2017, NK. [Izena-jima Is.] 2 exs., Izena Beach, 9.III.2017, YF; 1 ex., Nishi-kaigan, 11.III.2017, NK; 12 exs., Izena Beach, 11.III.2017, NK.

Notes. New to Iheya-jima Island. These individuals were collected from under a small pile of fallen leaves.

Rakovicius coreanus (KIM, 1980) (Fig. 5)

Specimens examined. [Iheya-jima Is.] 10 exs., Higashi-kaigan, near Mt. Gayôyama, 14.III.2017, NK. [Izena-jima Is.] 5 exs., Izena Beach, 9.III.2017, YF; 2 exs., Nishi-kaigan, 11.III.2017, NK; 9 exs., Izena Beach, 11.III.2017, NK.

Notes. New to Iheya- and Izena-jima Islands. These specimens were collected from under a small pile of fallen leaves together with *Psammodius kobayashii* NOMURA.

Saprosites japonicus WATERHOUSE, 1875

Specimens examined. [Iheya-jima Is.] 14 exs., Mt. Koshidake, 24.VII.2017, NK.

Subfamily **Scarabaeinae** LATREILLE, 1802***Digitonthophagus gazella*** (FABRICIUS, 1787)

Specimens examined. [Iheya-jima Is.] 1 ex., Maedomari, 12.III.2017, YT; 43 exs., Mt. Tannadake, 21.VII.2017, NK; 1 ex., near Mt. Maedake, 22.VII.2017, NK, by light trap; 19 exs., Mt. Tannadake, 24.VII.2017, NK.

***Onthophagus itoi* (NOMURA, 1976)**

Specimen examined. [Iheya-jima Is.] 1 ex., Mt. Koshidake, 21–23.VI.2018, ST, by flight interception trap.

***Onthophagus viduus* HAROLD, 1874**

Specimens examined. [Iheya-jima Is.] 5 exs., Maedomari, 12.III.2017, NK & YT; 1 ex., near Mt. Maedake, 22.VII.2017, NK; 1 ex., Mt. Tannadake, 24.VII.2017, NK.

***Parascatonomus murasakianus carnarius* (NOMURA, 1976)**

Specimen examined. [Iheya-jima Is.] 1 ex., Mt. Koshidake, 21–23.VI.2018, ST, by flight interception trap.

Subfamily **Rutelinae** MACLEAY, 1819***Anomala albopilosa yashiroi* (SAWADA, 1950) (Fig. 6)**

Specimens examined. [Iheya-jima Is.] 41 exs., Gakiya-dam, 21.VII.2017, NK, by light trap; 18 exs., near Mt. Maedake, 22.VII.2017, NK, by light trap; 4 exs., Mt. Koshidake, 21–23.VI.2018, ST, by light trap. [Noho-jima Is.] 4 exs., Iheya-mura, 23.VII.2017, NK, by light trap. [Izena-jima Is.] 5 exs., Jicchaku, 21.VII.2017, KO, by light trap; 4 exs., Uchihana, 22.VII.2017, KO, by light trap.

Note. New to Noho-jima Island.

***Anomala edentula okinawana* NOMURA, 1965 (Fig. 7)**

Specimens examined. [Iheya-jima Is.] 2 exs., Gakiya-dam, 21.VII.2017, NK, by light trap; 10 exs., near Mt. Maedake, 22.VII.2017, NK, by light trap; 2 exs., Mt. Tannadake, 24.VII.2017, NK, by light trap. [Noho-jima Is.] 3 exs., Iheya-mura, 23.VII.2017, NK, by light trap. [Izena-jima Is.] 1 ex., Jicchaku, 21.VII.2017, KO, by light trap; 1 ex., Uchihana, 24.VII.2017, YI, by light trap.

Note. New to Noho-jima Island.

***Anomala triangularis* SCHÖNFELDT, 1890**

Specimens examined. [Iheya-jima Is.] 1 ex. (larva), Higashi-kaigan, near Mt. Gayôyama, 15.III.2017, NK (eclosion: 10.V.2017); 3 exs. (corpse), near Mt. Maedake, 22.VII.2017, NK, by light trap.

***Anomala xanthopleura* ARROW, 1913**

Specimens examined. [Iheya-jima Is.] 1 ex., Mt. Gayôyama, 4.III.2017, NK; 9 exs., Gakiya-dam, 21.VII.2017, NK, by light trap; 5 exs., near Mt. Maedake, 22.VII.2017, NK; 5 exs., Mt. Koshidake, 23.VII.2017, NK; 9 exs., Mt. Tannadake, 24.VII.2017, NK, by light trap. [Izena-jima Is.] 3 exs., Jicchaku, 21.VII.2017, KO, by light trap; 1 ex., Nakado, 23.VII.2017, YI.

Subfamily **Dynastinae** MACLEAY, 1819***Eophileurus chinensis okinawanus* NOMURA, 1964**

Specimens examined. [Iheya-jima Is.] 1 ex., Mt. Gayôyama, 14.III.2017, NK; 1 ex., Mt. Koshidake, 21–23.VI.2018, ST, by light trap.

***Oryctes rhinoceros* (LINNAEUS, 1758) (Fig. 10)**

Specimens examined. [Iheya-jima Is.] 2 exs., near Mt. Maedake, 22.VII.2017, NK, by light trap;

1 ex., Mt. Koshidake, 21–23.VI.2018, ST, by light trap. [Noho-jima Is.] 1 ex., Iheya-mura, 23.VII.2017, NK, by light trap. [Izena-jima Is.] 13 exs. (larvae), Compost center, Jicchaku, 11.III.2017, NK & HN (eclosion: 11.VI.2017).

Notes. New to Noho- and Izena-jima Islands. On Izena-jima Island, a number of larvae of this species were found from huge piles of compost consisting of remnants of sugarcane at a compost center. This center may contribute to maintain a stable occurrence of this species.

Subfamily **Cetoniinae** LEACH, 1815

Gametis forticula forticula (JANSON, 1881)

Specimens examined. [Iheya-jima Is.] 7 exs., Mt. Koshidake, 13.III.2017, NK; 1 ex., Torazuiwa, 15.III.2017, NK. [Izena-jima Is.] 1 ex., Mt. Ônoyama, 10.III.2017, NK; 2 exs., Mt. Chijin-yama, 12.III.2017, YT; 3 exs., near Izena Elementary School, 12.III.2017, KO.

Protaetia exasperata iheyana SAKAI, 1989

Specimens examined. [Iheya-jima Is.] 1 ex. (larva), Mt. Gayôyama, 14.III.2017, NK (eclosion: 2.VII.2017); 1 ex. (corpse), Mt. Gayoyama, 15.III.2017, NK.

Protaetia ishigakia okinawana KUROSAWA, 1959

Specimen examined. [Iheya-jima Is.] 1 ex., near Mt. Maedake, 22.VII.2017, NK.

Protaetia lewisi lewisi (JANSON, 1888)

Specimen examined. [Iheya-jima Is.] 1 ex., near Mt. Maedomari, 22.VII.2017, NK.

Protaetia pryeri pryeri (JANSON, 1888)

Specimens examined. [Iheya-jima Is.] 2 exs. (larvae), Mt. Gayôyama, 14.III.2017, NK (eclosion: 29.VI.2017); 1 ex. (larva), Mt. Koshidake, 15.III.2017, NK (eclosion: 29.VI.2017); 1 ex., near Mt. Maedake, 22.VII.2017, NK; 1 ex., Mt. Koshidake, 23.VII.2017, NK; 1 ex., Dana, 24.VII.2017, NK; 46 exs., Mt. Koshidake, 21–23.VI.2018, ST, by flight interception trap. [Izena-jima Is.] 1 ex., Mt. Ônoyama, 12.III.2017, NK; 2 exs., Nakado, 23.VII.2017, KO & YI.

Nipponovalgus yonakuniensis SAWADA, 1941

Specimens examined. [Iheya-jima Is.] 3 exs., Mt. Koshidake, 15.III.2017, NK.

Subfamily **Melolonthinae** LEACH, 1819

Apogonia bicarinata LEWIS, 1896

Specimens examined. [Iheya-jima Is.] 1 ex., Gakiya-dam, 21.VII.2017, NK, by light trap; 4 exs., near Mt. Maedake, 22.VII.2017, NK, by light trap; 2 exs., Mt. Tannadake, 24.VII.2017, NK; 4 exs., Mt. Gayôyama, 24.VII.2017, NK.

Apogonia major bicavata ARROW, 1913

Specimen examined. [Iheya-jima Is.] 1 ex., Mt. Koshidake, 3–6.III.2018, ST, by light trap.

Maladera oshimana NOMURA, 1962 (Fig. 9)

Specimens examined. [Iheya-jima Is.] 2 exs., Mt. Gayôyama, 21.VII.2017, NK; 5 exs., near Mt.

Table 1. List of scarabaeoid species from each islands of the Iheya-Izena Islands. The presence of the scarabaeoids is indicated by "+" and the first records by the present study is indicated by "++". IH, NH and IZ in the Table mean the islands of Iheya-jima, Noho-jima and Izana-jima.

Specimens examined. [Iheya-jima Is.] 6 exs., Mt. Koshidake, 21–23.VI.2018, ST, by light trap.

Discussion

A total of 51 scarabaeoid species were recognized in previous and present studies from the Iheya-Izena Islands (Iheya-, Noho-, and Izena-jima Islands) (Table 1). The number is equivalent to 63% of the scarabaeoid species recorded from Okinawa-jima Island, which is known to be one of the richest in scarabaeoid fauna in the Ryukyus (FUJIOKA, 2001; SASAKI *et al.*, 2002; OKAJIMA & ARAYA, 2012). It is remarkable that the Iheya-Izena Islands have more than half of the scarabaeoid species inhabiting Okinawa Island despite the islands being only approximately 1/33 of Okinawa Island (1206.9 km²) in area. Among the Iheya-Izena Islands, Iheya-jima is confirmed to show the richest scarabaeoid fauna, being represented by 47 species including one species and two subspecies endemic to the island (*Maladera kusuii* MIYAKE, 1986, *Aegus laevicollis doii* FUJITA, 2002, and *Prosopocoilus dissimilis hayashii* FUJITA, 2009). On the other hand, some of *Aphodius* species have been supposed to invade to the island with livestock, and *Digitonthophagus gazella* (FABRICIUS, 1787) has actually been introduced artificially to the island. These coprophagous species may decrease in population in the future as the livestock industry declines in the islands. Two species of *Aphodius*, *A. brachysomus* SOLSKY, 1874 and *A. elegans* ALLIBERI, 1847, which were recorded only in 2001 (FUJIOKA, 2001), were not found by our enthusiastic survey, implying that these species have already drastically decreased in number.

Acknowledgments

We express our thanks to Mr. Kazuyuki OSHIMA, Mr. Hiroki NAGANO, Mr. Yutaka TAMADERA, Dr. Hiroaki KOJIMA, Mr. Yûsuke FUJISAWA, Mr. Masayuki HAYASHIMOTO, Ms. Masami YAMADA, Mr. Aki-ra NAGATA, and Mr. Yûto IMAFUKU (TUA) for their help in our field surveys, and to Dr. Tadashi ISHIKAWA and Dr. Hiroaki KOJIMA (TUA) for reviewing the manuscript.

要 約

金子直樹・樽 宗一朗：伊平屋伊是名諸島の伊平屋島、野甫島および伊是名島におけるコガネムシ上科甲虫（鞘翅目）の分布記録。——伊平屋伊是名諸島は、沖縄本島の北の沖合に位置する小さな群島である。2017年から2018年にかけて、春と夏に伊平屋島、野甫島、伊是名島の3島において野外調査を行ったところ、

4科34種のコガネムシ上科甲虫が得られたのでそれらの記録を報告した。そのうち伊平屋島から2種、野甫島から5種、伊是名島から4種が各島新記録であった。加えて、上記3島において過去に記録されたコガネムシ上科甲虫について、種のリストを作成するとともに、沖縄本島のコガネムシ上科相と比較を行った。その結果、伊平屋伊是名諸島には4科51種、実に沖縄本島の63%に相当するコガネムシ上科甲虫が生息することが明らかとなつた。
