

## Record of Some Weevils New to the Fauna of Minamidaitô-jima Is., Southwest Japan (Coleoptera, Curculionidae)

Hiroaki KOJIMA

Laboratory of Entomology, Tokyo University of Agriculture,  
1737 Funako, Atsugi, Kanagawa, 243-0034 Japan

In addition to the short report of the weevil fauna on Kitadaitô-jima Is. (KOJIMA, 2012), the author records following four species new to the fauna of Minamidaitô-jima Is., next to Kitadaitô-jima Is.

All the specimens were collected by the author and will be preserved in the Laboratory of Entomology, Tokyo University of Agriculture.

The author thanks Dr. K. MORIMOTO for his review of the manuscript. This study is supported in part by KAKENHI (24510333).

### Anthribidae

1. *Exillis japonicola* NAKANE, 1963  
1 ex., Minami, 7-III-2012; 2 exs., Higashisuimon, 10-III-2012.

### Curculionidae

2. *Shigizo rhombiformis* MORIMOTO, 1981  
13 exs., Minami, 7~8-III-2012 (on *Ficus microcarpa*).  
Though the host tree is common on the island, occurrence of the weevil has been restricted in one place.
3. *Microcryptorhynchus nipponicus* MORIMOTO et MIYAKAWA, 1985  
3 exs., Daitô-jinja, 8-III-2012.
4. *Microtribus splendidus* KONISHI, 1962  
2 exs., Minami, 7-III-2012; 4 exs., Daitô-jinja, 8-III-2012.
