

Additional Record of Weevils New to the Fauna of Hachijô-jima Island, the Izu Islands, Japan (Coleoptera, Curculionoidea)

Hiroaki KOJIMA

Laboratory of Entomology, Tokyo University of Agriculture,
1737 Funako, Atsugi, Kanagawa, 243-0034 Japan

In addition to my previous report (KOJIMA, 2011), following six species of weevils are newly added to the fauna of Hachijô-jima Is. Resultingly, a total of 71 species of weevils excepting Scolytidae and Platypodidae are known from the island.

The author thanks Dr. Jun-ichi AOKI for his donation of materials. This study was supported by KAKENHI (24510333).

Curculionidae

1. *Nothomylocerus griseus* (ROELOFS, 1873)
9 exs., Nakanogou, 12-V-2012, H. KOJIMA (on *Castanopsis sieboldii*).
2. *Lepidopistomodes fumosus* (FAUST, 1882)
10 exs., Mitsune-Mt. Miharayama, Mihara-rindô, 12-V-2012, H. KOJIMA; 6 exs., Sueyoshi, 19-V-2012, H. KOJIMA (on *Castanopsis sieboldii*).
3. *Dermatoxenus caesicollis* (GYLLENHAL, 1833)
1 ex., Sueyoshi, 19-V-2012, H. KOJIMA.
4. *Metialma signifera* PASCOE, 1871
3 exs., Shioma, 12-V-2012, H. KOJIMA; 2 exs., 16-V-2012, H. KOJIMA.
Weevils were captured on *Boehmeria biloba* (Raseitasou in Japanese; Urticaceae). New to the Izu Islands.
5. *Himatium ichihashii* (KONISHI, 1962)
3 exs., Hachijô Botanical Garden, Ôkagou, 23-IV-2009, J. AOKI; 1 ex., Furusatomura, Ôsato, 24-IV-2009, J. AOKI.

Dryophthoridae

6. *Diocalandra sasa* MORIMOTO, 1978
1 ex., Bôeidôro, 16-V-2012, H. KOJIMA.
